DETAILED ACTION

This Office action is responsive to communication received 02/12/2004 –
Amendment.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Donald Studebaker (Reg. No. 32,815) on March 03, 2004. During said interview, it was agreed to amend the claims to more distinctly highlight the flange configuration and to more accurately define the location of the shaft as well as the structure of the club head body.

The application has been amended as follows. The following changes reflect amendments agreed upon during the 03/03/2004 interview as well as the cancellation of previously non-elected claims. Claim 9 has been presented in "twice amended" form. A clean version of claim 9 has been provided at the end of this Office action for the convenience of the applicant.

IN THE CLAIMS:

This application is in condition for allowance except for the presence of non-elected claims 1-8 drawn to an invention non-elected without traverse. Accordingly, claims 1-8 been CANCELLED;

Art Unit: 3711

Claim 9. (Twice Amended) A golf putter for putting a golf ball on a green of a golf course by a golfer comprising:

an elongated putter head comprising a cylindrical body having a ball striking surface, a length of said putter head being greater than a width of said putter head with said cylindrical body [ball striking surface] extending around and parallel to a longitudinal axis of said putter head, said ball striking surface defined by a portion of said cylindrical body [including an infinite number of ball striking lines extending parallel to said longitudinal axis of said putter head] and continuing from at least a lower surface of said putter head to [over] an upper surface of said putter head;

a flange secured to and extending along a length of said putter head; said flange spaced from the upper and lower surfaces of said putter head and located substantially in a plane that is generally parallel to a horizontal putting surface when said lower surface of said putter head is in contact with the putting surface;

a shaft having a first end secured to said flange and extending generally transversely upwardly from said flange and located rearwardly of said cylindrical body [ball striking lines] when said flange is parallel to a horizontal putting surface; and

a grip secured to a second end of said shaft.

Art Unit: 3711
